

CrossLifecycle Diagnostics

Digital platform for cloud-based diagnostics services over the vehicle lifecycle

Connected mobility

Intelligent

Cloud-based remote diagnostics based on connected vehicle data, diagnostic data and algorithms

- Cloud-based diagnostic services for remote diagnostics
- Access to data relevant to diagnostics, using vehicle connectivity
- Diagnostic runtime in the vehicle on the connectivity unit or vehicle computer, or in the cloud
- Failure prediction based on digital data in the "diagnostic twin"
- Enables monitoring of vehicle status and problem detection
- Diagnostic services can be integrated into fleet management platform
- Reduces downtime

Scalable

Versatile, modular framework for targeted applications applicable for vehicle manufacturers, fleet operators and mobility providers
